Evaporative Cooling Workwear

#thescience 

## What's HyperKewl

A super absorbent polymer fibre fabric made in a medical grade factory

## What does it do?

Cools the user down by 10/12°F for 5/10hrs. After 30 mins it will have pulled out enough heat to accelerate the users recovery

## Why's it good news?

Pulling heat instead of pushing ice is less invasive on the users skin, no ice burns just pure cooling. HypreKewl helps avoid heat stress and thermal skin discomfort

## When not to use

If humidity is over 90% dont use HyperKewl, the polymers will start to warm up rather than cool

## Supercharge me

Helps to "super-charge" the bodies natural cooling method. Our bodies will normally cool us off through the evaporation of sweat on the skin

# HYPERKEWL<sup>TM</sup>

Evaporative Cooling Workwear

#thefacts 

Non-toxic & lightweight ✓

Lasts for 5/10hrs ✓

Activate in water for 2 minutes ✓

Evaporative cooling ✓

Used by Formula 1 ✓

Easy to use in any work environment ✓

Airflow required ✓

Cools down 10/12°F ✓

Can be reused 140 x 5/10hrs cycles ✓

Hand & machine washable version available ✓
